RENDEMENTO ESCOLAR E CONDUTAS DE RISCO

UNHA INVESTIGACIÓN EN ESCOLARES DE SECUNDARIA

1. RESUMO

Cando atopamos en internet o estudo YRBSS (*Youth Risk Behavior Surveillance System*) que analiza cada dous anos os comportamentos de risco dos estudantes de secundaria de Estados Unidos, decidimos que queríamos facer este estudo no IES Mugardos e comparar os resultados para saber se había moitas diferenzas entre a xuventude de Estados Unidos e a de Mugardos no que a comportamentos de risco se refire.

Despois de aplicar unha longa enquisa a todo o alumnado de ESO na que se tivo especial coidado e asociar cada enquisa coa nota media acadada na primeira avaliación polo alumno ou pola alumna que a cubría, os catro autores deste traballo decidimos repartirnos as seguintes condutas de risco: consumo de alcohol, drogas, televisión, xogos con teléfono móbil e redes sociais, para analizar a influencia deste consumo nas cualificacións escolares do alumnado do IES Mugardos. Usando a correlación lineal e regresogramas, entre outras técnicas estatísticas obtivemos a resposta.

2. PUNTO DE PARTIDA

Como redactar unha cuestión nun test para coñecer si “*Inflúen as horas de sono no rendemento escolar?*” deu orixe a este traballo. Aparentemente non ten nada que ver a pregunta en cursiva co título do noso traballo, así que trataremos de contar o proceso, longo e complicado, seguido dende que a profesora nos fixo esa pregunta na clase de Métodos Estadísticos de 2º de bacharelato aos 10 compañeiros e compañeiras como un posible exemplo de estudo de regresión, ata o momento de redactar este informe.

“*Inflúen as horas de sono no rendemento escolar?*”. Como facer esta pregunta nunha enquisa?. O que queríamos saber era si durmir poucas horas tiña repercusión nas notas, pero,... durmir poucas horas... ¿cando? ¿cantas son poucas horas? , a profesora insistía na dificultade de redactar ben as preguntas para facer un estudo estatístico fiable, así que nos pideu que investigásemos en internet traballos similares pois alguén tería estudado esta cuestión. Pideunos tamén que buscásemos en inglés para ampliar as posibilidades de éxito.

E así atopamos o artigo: “*Relationships between hours of sleep and health-risk behaviors in US adolescent students*” de Lela R. McKnight-Eily e outros ¹ no que se trata estatisticamente a relación entre horas de sono e condutas de risco en estudantes adolescentes de Estados Unidos. Neste artigo non aparecía a redacción da preguntas que estábamos buscando pero atopamos algo mellor: a referencia ao estudo YRBSS.

3. O ESTUDO “YOUTH RISK BEHAVIOR SURVEILLANCE SYSTEM (YRBSS)”

O YRBSS pode traducirse como “Sistema de vixilancia de comportamentos de risco da xuventude”, é unha enquisa bienal nacional que se aplica nas escolas secundarias públicas e privadas a mostras de estudantes dos graos 9, 10, 11 e 12 (equivalentes a 3º e 4º de ESO, 1º e 2º de bacharelato en España) en todos os estados de Estados Unidos.

Lela R. McKnight-Eilya, Danice K. Eatonb, Richard Lowryb, Janet B. Crofta, Letitia Presley-Cantrella, Geraldine S. Perrya. *Preventive Medicine*. www.elsevier.com/locate/ypmed

Controla seis tipos de comportamentos de risco de saúde que son as que contribúen ás causas principais de morte e discapacidade na xuventude e nos adultos:

- Comportamentos que poden conducir a danos involuntarios e violencia
- Comportamentos sexuais que poden conducir a embarazos involuntarios e enfermidades de transmisión sexual
- Alcohol e outras drogas
- Consumo de tabaco
- Comportamentos dietéticos pouco saudables
- Actividad física inadecuada

Tamén mide a prevalencia de asma e obesidade.

Estes estudos fanse a través dos resultados de cuestionarios nacionais realizados polos CDC (Centros de Control e Prevención de Enfermidades) e polas axencias de educación e de saúde dos estados que conforman os Estados Unidos. No ano 2013 completáronse 13 633 cuestionarios correspondentes a mostras de estudantes de 148 centros públicos e privados.

O CDC dispón dunha moi completa páxina web: <http://www.cdc.gov/HealthyYouth/yrbs/index.htm> que permite navegar por calquera dos estados do país e consultar resultados parciais ou totais do estudo YRBSS e ademais ten enlaces a moitas publicacións relacionadas con condutas de risco.

O mellor para nós foi que tamén están a disposición de que queira consultalos os cuestionarios que se empregaron nos estudos dende o ano 1991 -pois son revisados cada dous anos-. O que se aplica este ano 2015 está recén subido en formato rtf e pode ser aberto cos procesadores de texto habituais. ¡Isto era o que estábamos buscando!, agora coñecemos como formulan a pregunta do sono, resulta ser a Q98:

On an average school night, how many hours of sleep do you get?	
A.	4 or less hours
B.	5 hours
C.	6 hours
D.	7 hours
E.	8 hours
F.	9 hours
G.	10 or more hours

que nós traducimos do seguinte xeito:

Q88	Por termo medio, cantas horas dormes nun día de escola?	
	A	4 ou menos horas
	B	5 horas
	C	6 horas
	D	7 horas
	E	8 horas
	F	9 horas
	G	10 ou máis horas

Chegados a este punto démonos conta que o cuestionario era moi interesante, máis que a enquisa para coñecer unicamente a relación entre horas de sono e rendemento escolar, e pasáosenos pola cabeza facer un estudo similar ao YRBSS no IES Mugardos. Ademais do interese de coñecer os resultados das condutas de risco no IES Mugardos, permitiríanos facer diferentes análises estatísticas coas respostas obtidas.

Consultamos coa profesora que nos avisou da complexidade da tarefa, pero estabamos decididos, así que puxemos mans á obra. Vimos que si conseguíamos sacar adiante un estudo como o YRBSS e, ademais, se lográbamos nel a nota media obtida por cada alumno e alumna na primeira avaliación, teríamos unha base de datos moi completa que nos daría pé para facer varios traballos de investigación estatística distintos. O grupo que formamos Jessica, Yaiza, Fátima e Laura acordamos abordar a análise comparativa dos estudos YRBSS de EEUU e do que faríamos en Mugardos a imitación do YRBSS.

4. OBXECTIVOS

Pretendemos co noso traballo os seguintes obxectivos:

- Aplicar coñecementos estatísticos adquiridos na aula nun contexto real e mellorar a nosa formación estatística con novos coñecementos.
- Diseñar e realizar un estudo estatístico ao alumnado do IES Mugardos tendo como modelo o último estudo YRBSS de Estados Unidos.
- Estudar se existen evidencias estatísticas de relación entre condutas de risco como consumo de alcohol, drogas, televisión, xogos con teléfono móbil e redes sociais e as cualificacións escolares do alumnado de ESO e bacharelato do IES Mugardos.
- Elaborar un documento baseado no traballo colaborativo como resultado do proceso de busca, análise e selección de información relevante, coa ferramenta tecnolóxica axeitada e compartilo para a súa discusión ou difusión.

5. APLICACIÓN DUNHA VERSIÓN DO ESTUDO YRBSS NO IES MUGARDOS

O proceso desenvolveuse da forma seguinte. En primeiro lugar conseguimos as preguntas que conformarán o estudo de 2015 en EEUU e repartímolos entre nós para analizar a conveniencia ou non de incluílas na enquisa de Mugardos.

Das 99 preguntas do cuestionario americano (**ANEXO 1**) hai moitas que para nós non tiña sentido facelas en Mugardos, estas son un exemplo :

nº 4: “*Es hispano ou latino*”

nº 5: “*Cal é a túa raza (sinala unha ou máis respostas.)*”

- A. Indio americano ou nativo de AlasKa*
- B. Asiático*
- C. Negro ou afroamericano*
- D. Nativo de Hawaii ou doutras illas do Pacífico*
- E. Branco*

nº 14: *Durante os pasados 30 días, cantos días colliches unha arma (gun)?*

- A. 0 días*
- B. 1 día*
- C. 2 ou 3 días*
- D. 4 ou 5 días*
- E. 6 ou máis días*

Algunha pregunta non se elixiu porque non nos parecía apropiado facerlla aos compañeiros:

- nº 64. Durante a túa vida, con cantas persoas tiveches relacións sexuais?*
- A. Nunca tiveren relacións sexuais*
 - B. 1 persoa*
 - C. 2 persoas*
 - D. 3 persoas*
 - E. 4 persoas*
 - F. 5 persoas*
 - G. 6 ou máis persoas*

Outras non as eliximos sen ter motivos especiais para iso :

- nº 77. Durante os pasados 7 días, cantos días comiches cenorias?*
- A. Non comín cenorias os pasados 7 días*
 - B. De 1 a 3 veces durante os pasados 7 días*
 - C. De 4 a 6 veces durante os pasados 7 días*
 - D. 1 vez ao día*
 - E. 2 veces ao día*
 - F. 3 veces ao día*
 - G. 4 ou máis veces ao día*

Unha vez que decidimos as preguntas que estarían na nosa enquisa, o paso seguinte foi traducilas do inglés ao galego e despois preparar o cuestionario. Mentres tanto, a nosa profesora encargouse de presentar o proxecto ao claustro e á CCP para pedir a súa autorización.

A maiores realizamos outro traballo que lle daría máis forza estatística á nosa investigación: calculamos a nota media de cada alumno e alumna na primeira avaliación. Contabilizamos todas as materias e para manter a confidenciabilidade a profesora eliminou os nomes dos listados que nos proporcionou a dirección do Centro e asinou un número a cada nota media. Só ela estaba en condicións de saber a quen correspondía cada nota.

Temos que dicir que no estudo YRBSS tamén se inclúen as cualificacións escolares, pero a través dunha pregunta que non nos parece moi precisa, a 97:

- nº 97. Durante os pasados doce meses, como describirías as túas cualificacións escolares?*
- A. A maioría sobresaíntes*
 - B. A maioría notables*
 - C. A maioría de bens*
 - D. A maioría de aprobado*
 - E. A maioría de suspensos*
 - F. Ningunha das anteriores*
 - G. Non estou seguro/a*

Finalmente, o estudo do IES Mugar dos quedou conformado por 52 preguntas (**ANEXO 2**) que abarcan preguntas sobre comportamentos que poden conducir a danos involuntarios e violencia, comportamentos sexuais que poden conducir a embarazos involuntarios e enfermidades de transmisión sexual, alcohol e outras drogas, consumo de tabaco, comportamentos dietéticos pouco saudables e actividade física inadecuada.

Ademais había dúas preguntas que non aparecían no cuestionario americano pero que a nós si nos parecía interesante que estivesen, son as seguintes:

P43	Nos días de escola, cantas horas usas o móbil para xogar?	
	A	Non uso o móbil os días de escola.
	B	Menos duo ba hora por día
	C	1 hora ao día
	D	2 horas ao día
	E	3 horas ao día
	F	4 horas ao día
	G	5 ou máis horas ao día
P44	Nos días de escola, cantas horas usas o móbil nas redes sociais?	
	A	Non uso o móbil os días de escola.
	B	Menos duo ba hora por día
	C	1 hora ao día
	D	2 horas ao día
	E	3 horas ao día
	F	4 horas ao día
	G	5 ou máis horas ao día

Cos formularios e as cualificacións preparados era o momento de deseñar como iamos facer as enquisas, xa que queriamos garantir o anonimato e á vez que se contestara coa maior seriedade e fiabilidade.

Organizamos o calendario para que os distintos gupos cubriran os cuestionarios de forma que causase a menor molestia ao profesorado e á marcha do curso.

As enquisas cubríronse nunha sesión de clase que tratamos coincidira coa hora de titoría na ESO e coa hora de alternativa á Relixión en bacharelato. O profesor ou profesora permanecía na aula dando así testemuño da seriedade do proceso. Neste punto temos que agradecer a colaboración do alumnado e profesorado do IES Mugardos, pois este traballo non sería posible sen ela.

As entrevistas desenvolvéronse segundo o calendario establecido. Consequimos que se fixeran nun ambiente serio, ao comezar explicabamos o proxecto, a continuación a profesora pedíalles que anotaran na enquisa cada un a súa nota media que ela lles facilitaba, logo dábamos as explicacións necesarias cando se nos pedían –ás veces non entendían algunha palabra, como sucedeu con *liorta*-.

Garantimos o anonimato xa que, inmediatamente despois de facer a enquisa nun grupo, a profesora levaba os cuestionarios cubertos ao director do centro. O director custodiábaos e, cada vez que recibía un lote, mesturaba as enquisas. Cando todos os grupos realizaron as enquisas, o director devolveunos un só paquete con todas as enquisas mesturadas.

Imaxes das enquisas

O lote contiña 202 cuestionarios válidos dos 226 posibles, é dicir, o 89,4% de todo o alumnado do Centro; tiñamos conseguido un número de enquisas que representaban con fiabilidade aos estudantes de secundaria de Mugardos.

A continuación organizámonos para pasar todos os datos a unha folla de cálculo, un traballo un pouco pesado, xa que tiñamos que pasar $202 \times 53 = 10706$ datos.

Pasando os datos da enquisa. Á esquerda Marcelo e Martín, á dereita, Alba e Sergio

6. ESTUDO ESTATÍSTICO

Recollemos un total de 202 enquisas repartidas poe curso do seguinte xeito:

Cantos anos tes?			%
A	13 anos	45	22,3
B	14 anos	22	10,9
C	15 anos	30	14,9
D	16 anos	48	23,8
E	17 anos	45	22,3
F	18 anos ou máis	12	5,9
Cal é o teu sexo?			
A	Masculino	99	49,0
B	Femenino	102	50,5
Que curso estudas actualmente?			
A	1º ESO	28	13,9
B	2º ESO	30	14,9
C	3º ESO	23	11,4
D	4º ESO	30	14,9
E	1º BAC	51	25,2
F	2º BAC	39	19,3

(ANEXO 3)

Non era posible analizar estatisticamente todas as condutas de risco que aparecen na enquisa e por iso decidimos quedarnos coas relacionadas co consumo de alcohol e drogas, das que se encargarían Alba e Sergio e coas de uso de televisión, móbil para xogos e para redes sociais que serían responsabilidade de Martín e Marcelo.

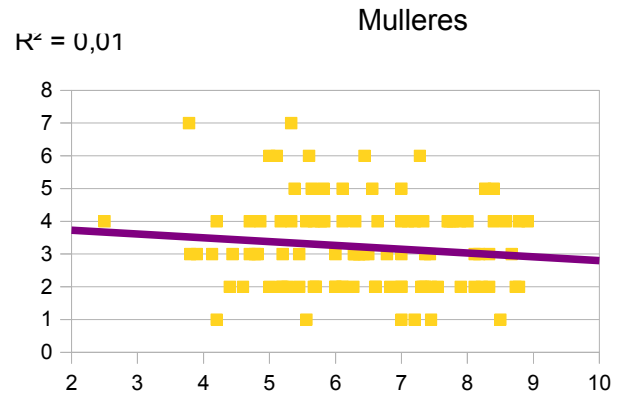

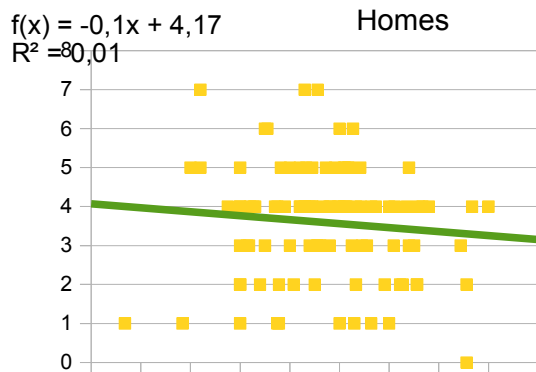

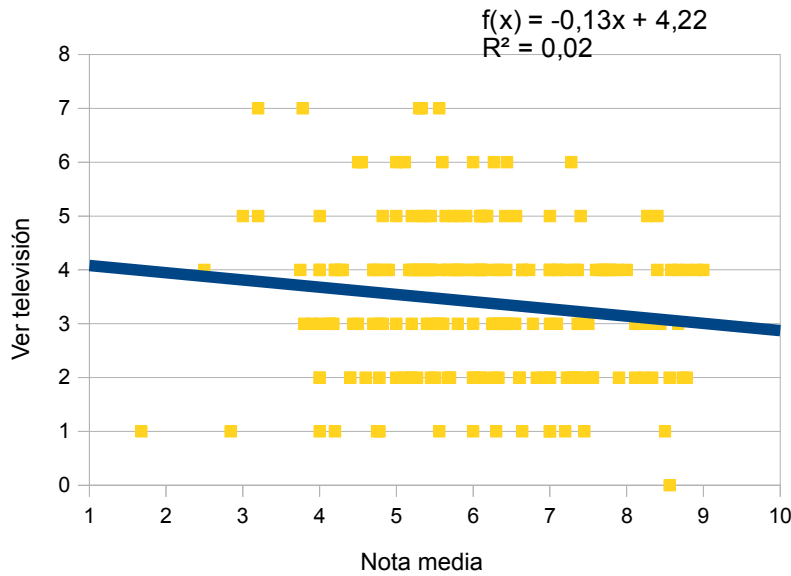

Trataríamos de relacionar as respostas coas cualificacións académicas obtidas na 1ª avaliación para coñecer se hai correlación entre as condutas de risco e as cualificacións. Ademais tentaríamos analizar as respostas por sexos.

6.1 VER TELEVISIÓN-RENDEMENTO ESCOLAR

A pregunta era: "Nos días de escola, cantas horas ves a televisión?" e as posibles respostas:

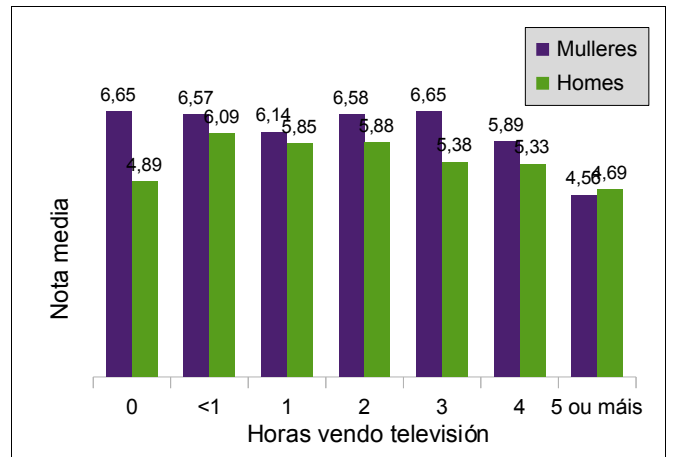

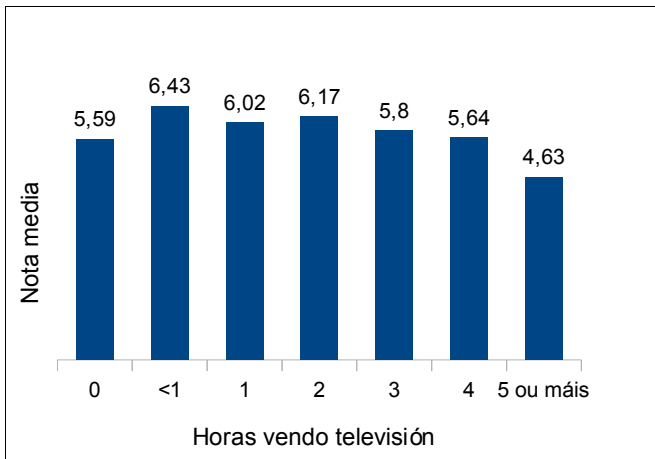

Non vexo a televisión nos días de escola
Menos dunha hora por día
1 hora ao día
2 horas ao día
3 horas ao día
4 horas ao día

A correlación das respostas coa nota media pode verse na gráficas:

Pode observarse unha moi leve tendencia á baixa: cando se ve a tele moitas horas, as notas baixan un pouco, pero a correlación é moi pequena como pode observarse co valor de r (a raíz cadrada de r^2), moi alonxado de 1 e de -1.

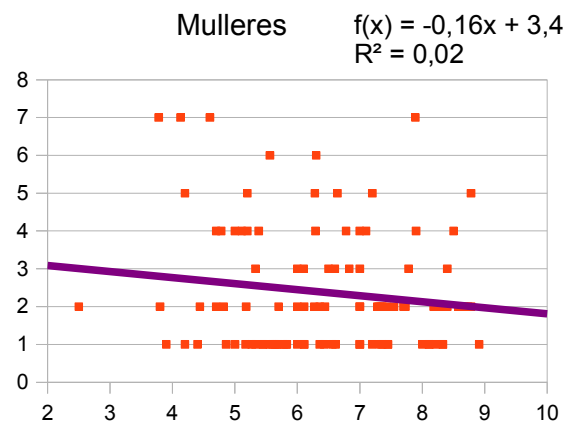

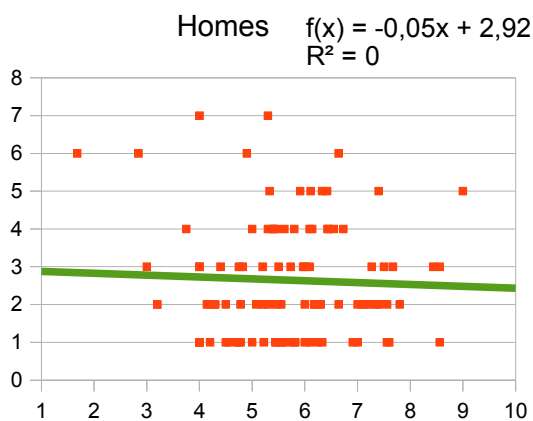

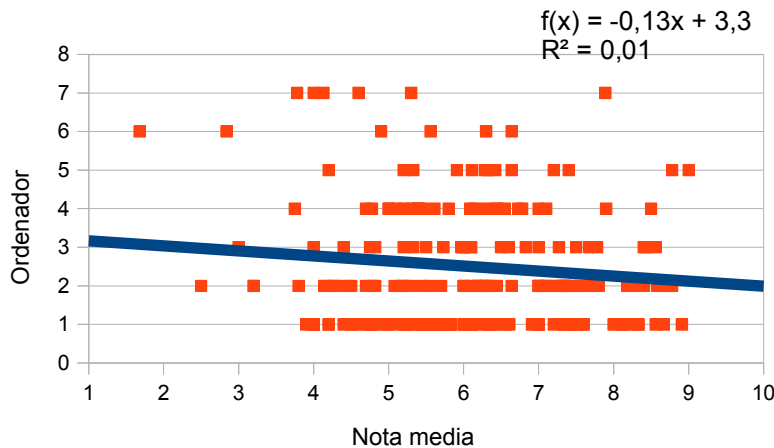

Para poder analizar os datos sen impoñer a aproximación a unha función, facemos un regresograma para o que calculamos a nota media de todas as persoas que ven a tele o mesmo número de horas. Ademais facemos outro tratando separadamente os resultados por sexo.

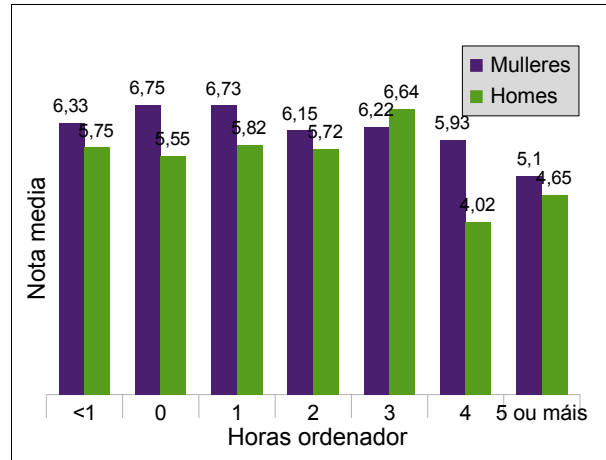

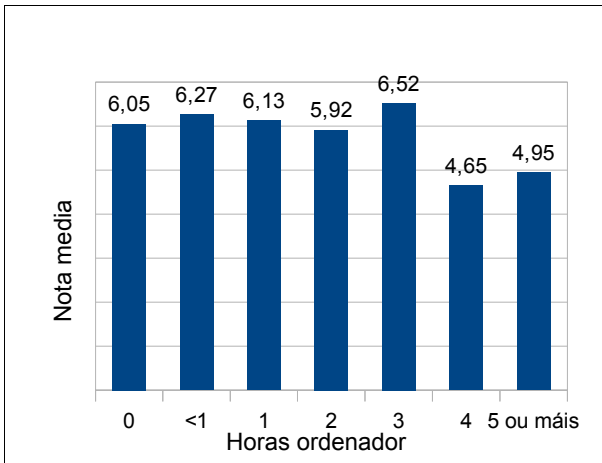

Confirman a pouca relación entre as dúas variables, só parece ter influencia no caso en que se pase máis de cinco horas vendo a televisión un día de escola. É interesante observar que a nota media das mulleres é superior a dos homes en todas as series salvo a última.

6.2 USO ORDENADOR-RENDEMENTO ESCOLAR

A pregunta era “Nos días de escola, cantas horas estás no ordenador, sen ser traballo de clase?”. As respostas posibles as mesmas que no apartado anterior. A regresión lineal entre as respostas e a nota media de cada persoa aparece na gráfica seguinte:

De novo moi leve tendencia á baixada de notas ao aumentar o número de horas que se usa o ordenador, nos homes obtemos $r=0$, é dicir, ausencia de correlación. Verémolo tamén coas notas medias por horas en que se usa o ordenador:

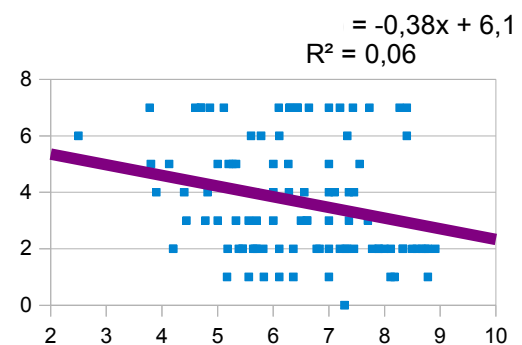

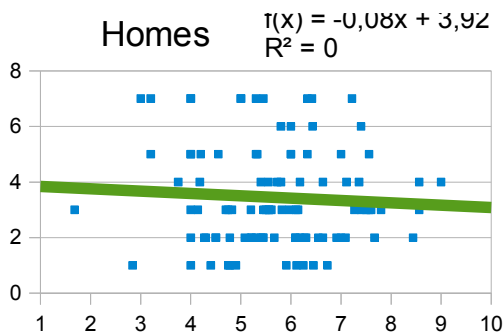

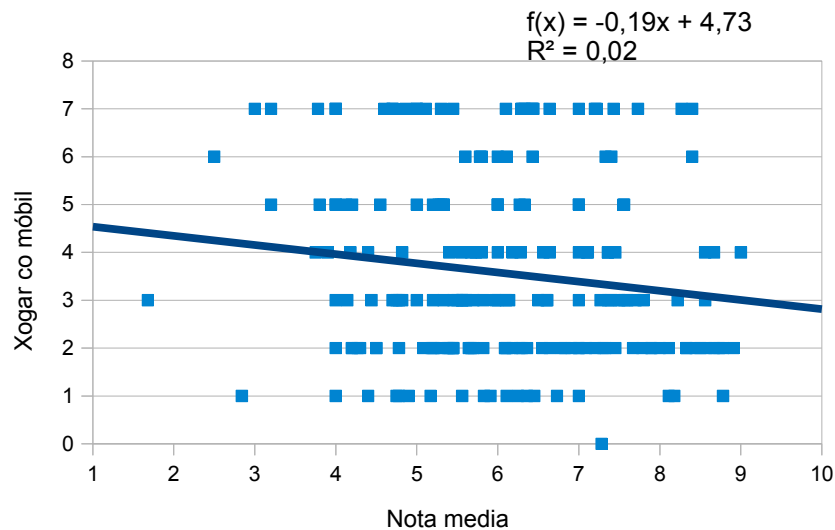

A diferenza da regresión, nestas gráficas pode observarse como o rendemento cae espectacularmente cando o ordenador se usa máis de catro horas ao día, especialmente nos homes. Seguen a acadarse mellores cualificacións nas mulleres que nos homes.

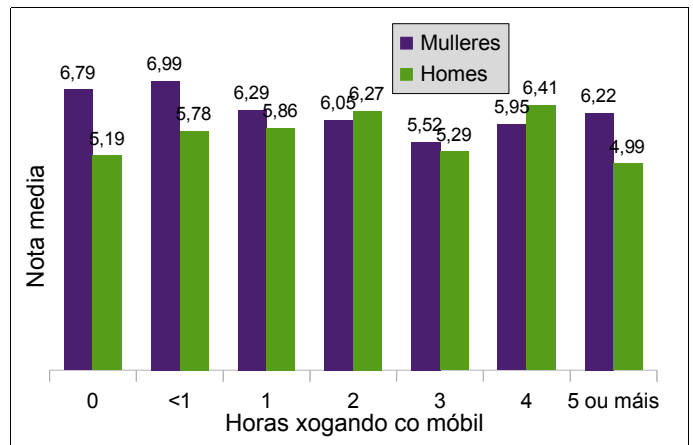

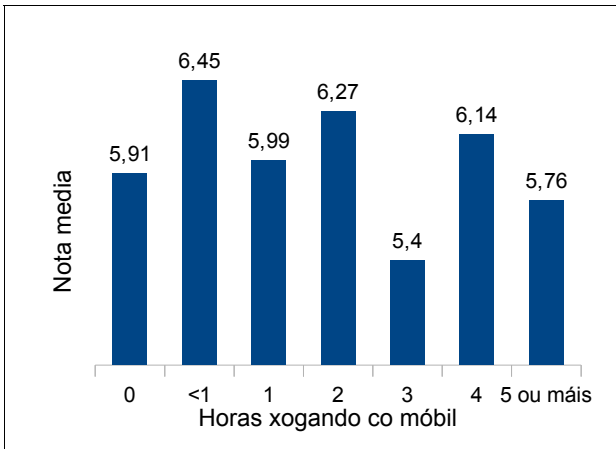

6.3 XOGAR CO MÓBIL-RENDEMENTO ESCOLAR

Pregunta: “Nos días de escola cantas horas usas o móbil para xogar?” e as posibles respostas, as mesmas que nas preguntas anteriores.

De novo comezamos coa regresión lineal obtendo as seguintes gráficas e resultados:

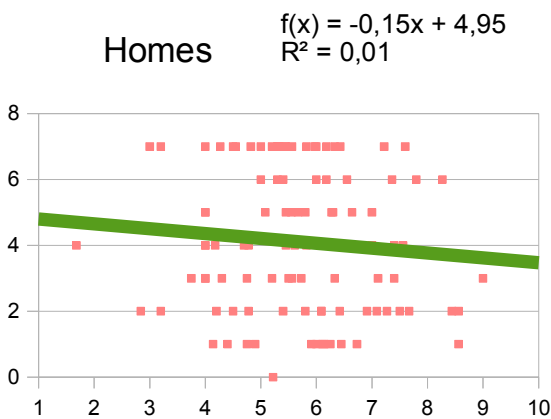

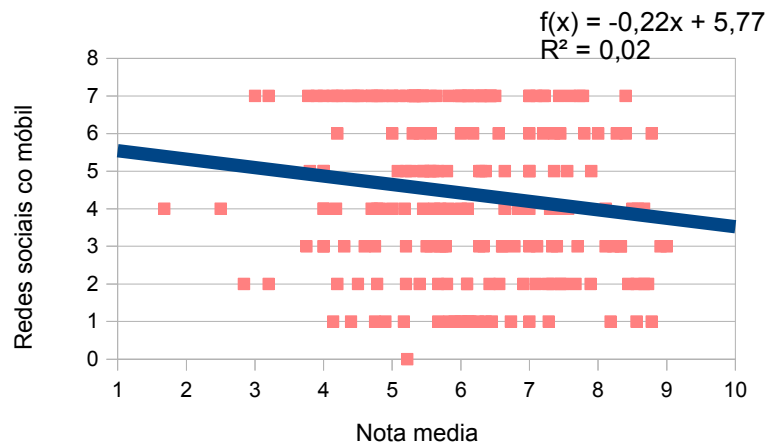

Unha vez máis a regresión é case inexistente aínda que por sexos se observa como as mulleres que pasan moito tempo xogando co móbil descenden nas cualificacións mentres que nos homes a correlación é inexistente. O regresograma ten o seguinte aspecto:

Estrañas gráficas de difícil interpretación. De novo malos resultados se se xoga co móbil 5 ou máis horas os días de escola.

6.4 REDES SOCIAIS CO MÓBIL-RENDEMENTO ESCOLAR

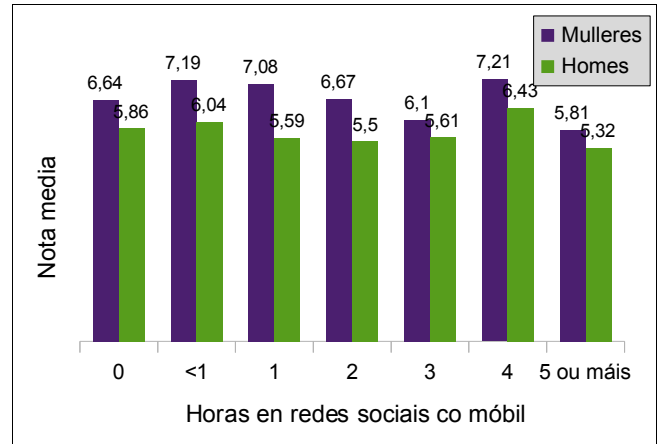

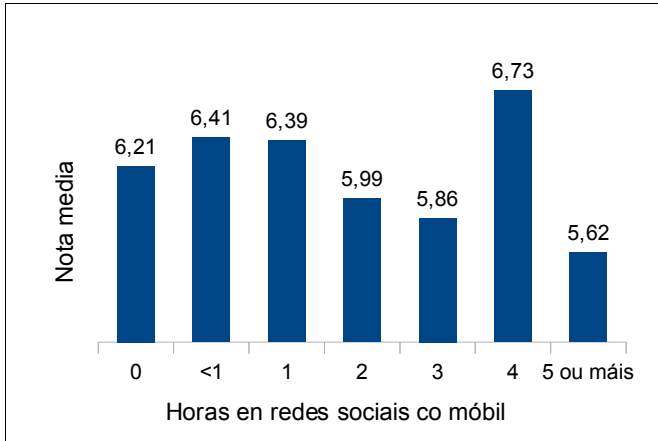

A pregunta que se facía era: “Nos días de escola cantas horas usas o móbil nas redes sociais?” e as respostas posibles, as mesmas que nas preguntas anteriores, e os resultados, os seguintes:

De novo repítense resultados: moi leve relación entre usar as redes sociais co móbil moitas horas e obter peores cualificacións.

Nas mulleres acentúanse as diferenzas e parece que estar nas redes sociais moitas horas si inflúe nos resultados académicos, que son peores.

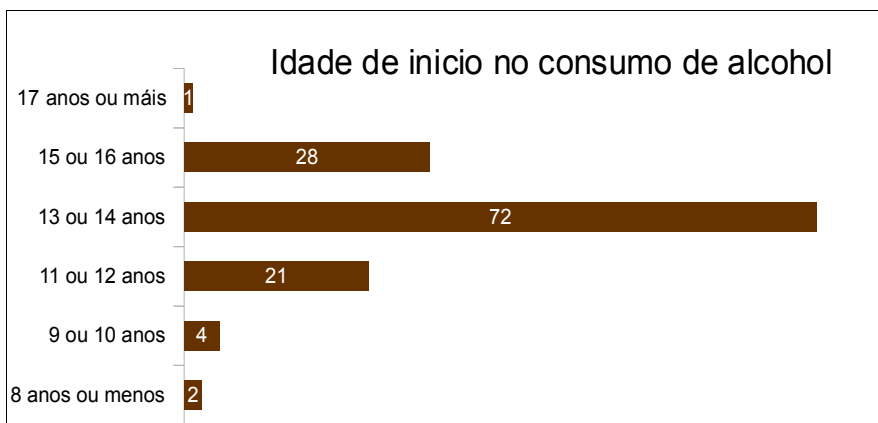

Rematamos esta serie de apartados relacionados co uso da tecnoloxía facendo o regresograma coa nota media por cada tipo de resposta recibida.

Outra vez resultados de difícil interpretación. Algo que é importante: non usar o móbil coas redes sociais non fai que se teñan mellores resultados. Pode parecer sorprendente que tanto os homes como as mulleres que din usar as redes sociais co móbil catro horas diarias, sexan os que mellor nota media teñen.

6.5 CONSUMO DE ALCOHOL-RENDEMENTO ESCOLAR

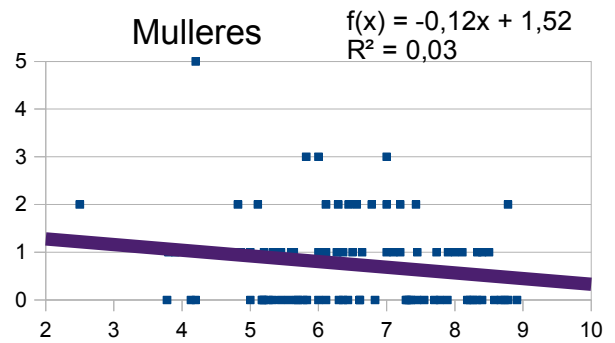

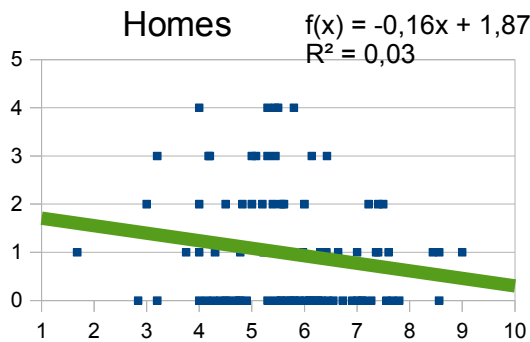

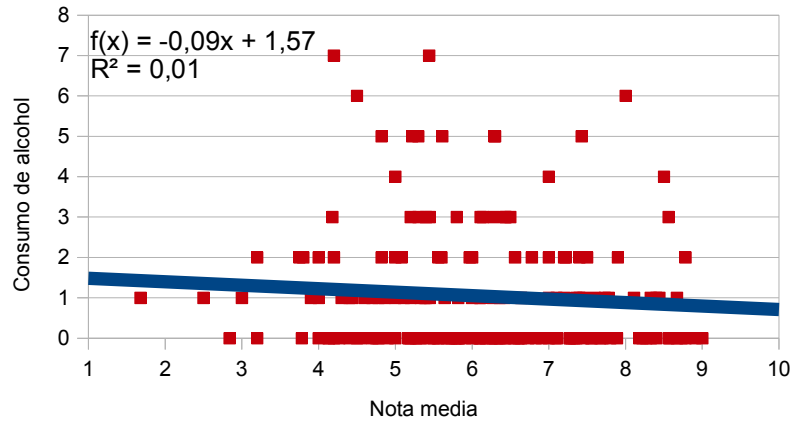

Abordamos este apartado de xeito algo diferente aos anteriores. O primeiro dato que reseñamos é a idade de comezo no consumo de alcohol. Os resultados que obtivemos vense na gráfica:

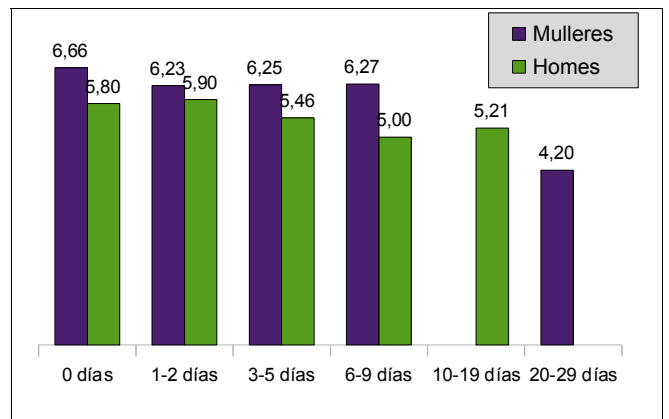

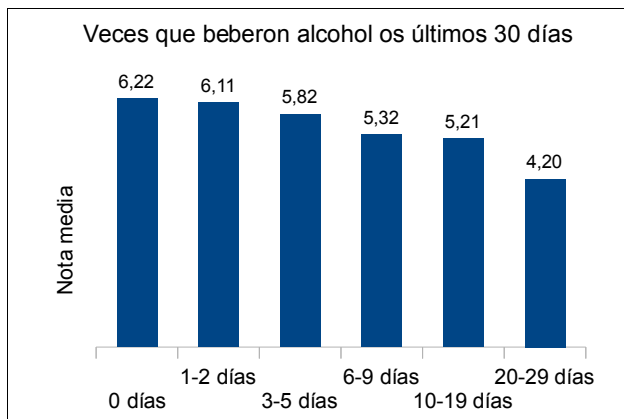

Agora analizamos as respostas á pregunta:

Durante os últimos 30 días, cantas veces tomaches alcohol?	
A	0 días
B	1 ou 2 días
C	3 a 5 días
D	6 a 9 días
E	10 a 19 días
F	20 a 29 días
G	30 días

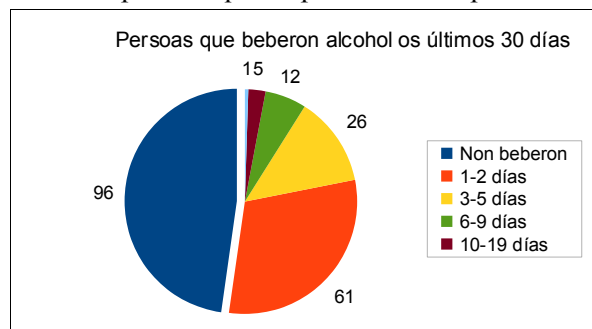

Comezaremos facendo unha regresión lineal na que cada resposta se asocia á nota media para ver a tendencia xeral e se o consumo de alcohol ten correlación coas notas:

De novo moi leve correlación negativa. E agora a nota media por tipo de resposta

Obsérvase que ao aumentar o consumo, a nota media, baixa. As gráficas anteriores deben completarse coa que proporciona o número de persoas que responden cada opción:

A enquisa tamén proporciona unha información interesante sobre como os escolares consiguen o alcohol. As respostas son:

Durante os último 30 días, cando bebiches, como conseguiches o alcohol?			%
A	Non bebín alcohol	100	49,5
B	Compreino nun supermercado ou estación de gasolina	23	11,4
C	Compreino nun bar ou restaurante	43	21,3
D	Compreino durante un concerto ou evento deportivo	12	5,9
E	Deille o diñeiro a outra persoa para que o comprase	16	7,9
F	Deumo alguén	5	2,5
G	Deumo un membro da miña familia	6	3,0
H	Obtivo doutra maneira	2	1,0

é dicir, 78 persoas admiten mercalo nalgún local. Pero só hai 12 persoas maiores de 18 anos e dúas non beben nunca alcohol, así que ... Quen vendeu o alcohol a 68 menores de idade os últimos 30 días?

Continuando co consumo de alcohol, imos aplicar os nosos coñecementos de probabilidade para coñecer a probabilidade de aprobar sendo consumidor de alcohol e comparala coa probabilidade de aprobar non sendo consumidor de alcohol.

Usaremos o seguinte código:

A=" Aprobar, obter unha cualificación maior ou igual que 5"

Non A="Obter cualificación menor que 5"

B="Admitir consumir alcohol"

Non B= "Non beber alcohol"

Os datos obtidos na enquisa podemos resumilos na seguinte táboa de continxencia:

	NOTA>5	NOTA<5	
BEBER	96	32	128
NON BEBER	61	12	73
	157	44	202

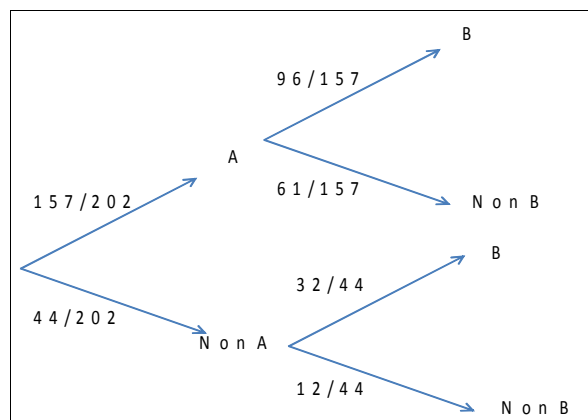

que colocamos en diagrama de árbore e aplicamos o Teorema de Bayes.

Teorema de Bayes:

$$P(B_i/A) = \frac{P(B_i \cap A)}{P(A)} =$$

$$P(B_i/A) = \frac{P(A/B_i)P(B_i)}{\sum_{j=1}^k P(A/B_j)P(B_j)}$$

$$i = 1, 2, 3, \dots, k$$

Así obtemos:

$$P(A/B) = \frac{P(A) \cdot P(B/A)}{P(A) \cdot P(B/A) + P(\text{non}A) \cdot P(B/\text{non}A)} = \frac{\frac{157}{202} \cdot \frac{96}{157}}{\frac{157}{202} \cdot \frac{96}{157} + \frac{44}{202} \cdot \frac{32}{44}} = \frac{96}{128} = 0,75$$

$$P(A|nonB) = \frac{P(A) \cdot P(nonB|A)}{P(A) \cdot P(nonB|A) + P(nonA) \cdot P(nonB|nonA)} = \frac{\frac{157}{202} \cdot \frac{61}{157}}{\frac{157}{202} \cdot \frac{61}{157} + \frac{44}{202} \cdot \frac{12}{44}} = \frac{61}{73} = 0,84$$

É dicir, se non se bebe é maior a probabilidade de aprobar.

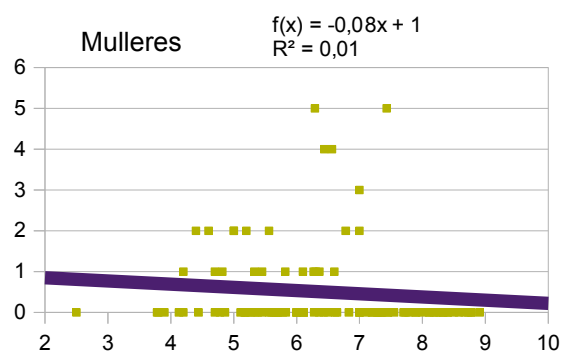

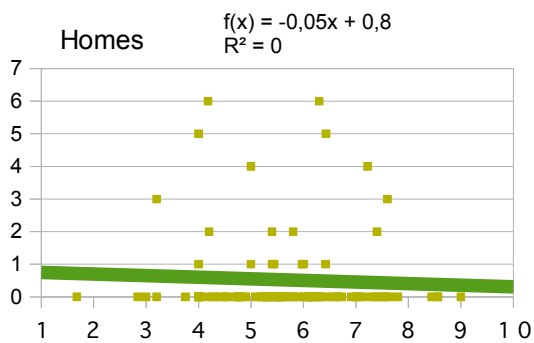

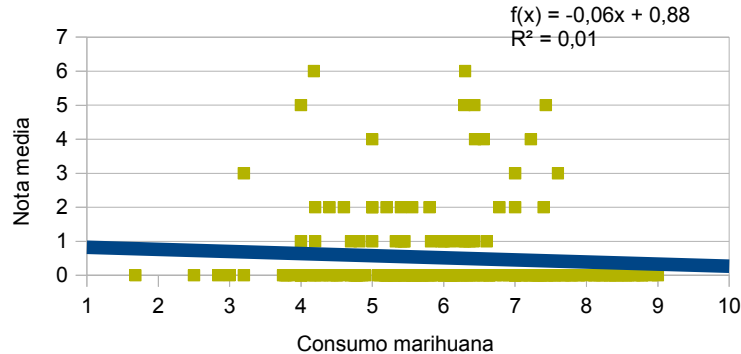

Tamén se cumpre que a nota media dos que non beben é 6,22, e a nota media dos que beben, 5,90, apenas unhas décimas máis alta pero ... ¡son unhas décimas!

6.6 CONSUMO DE MARIHUANA-RENDEMENTO ESCOLAR

Esta é primeira pregunta sobre marihuana que aparecía na enquisa e o número de respostas recibidas a cada apartado, coas porcentaxes á dereita.

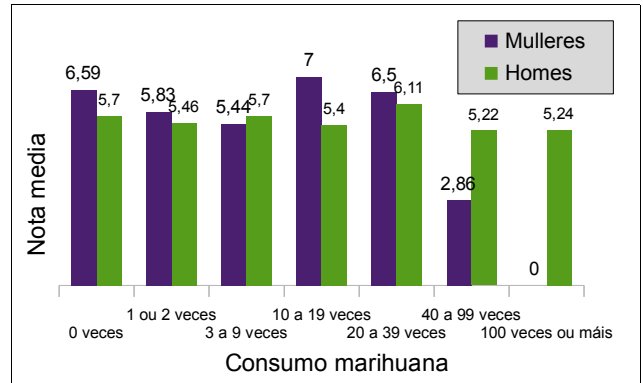

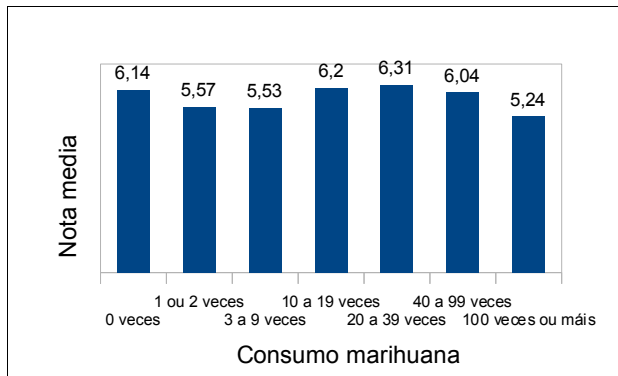

P24	Durante toda a túa vida cantas veces tomaches marihuana?			
	A	0 veces		
	B	1 ou 2 veces	18	8,9
	C	3 a 9 veces	12	5,9
	D	10 a 19 veces	4	2,0
	E	20 a 39 veces	4	2,0
	F	40 a 99 veces	4	2,0
	G	100 veces ou máis	2	1,0

A pesar de que a maioría do alumnado non consume marihuana, decidimos facer a regresión como nos anteriores apartados:

Como supoñíamos, non hai datos que evidencien regresión.

Con máis detalle vemos:

Non ofrecen as gráficas datos interesantes salvo a constatación de que o uso frecuente diminúe o rendemento.

A idade de iniciarse no consumo de marihuana é para 14 persoas os 13-14 anos e para 23 os 15-16 anos. Catro persoas iniciáronse aos 17 anos. E por último, estes son os datos de consumo nos últimos 30 días que mostran a un 89% do alumnado do centro que non consumiu marihuana nos últimos 30 días.

Durante os últimos 30 días, cantas veces tomaches marihuana?		
A	0 veces	182
B	1 ou 2 veces	11
C	3 a 9 veces	3
D	10 a 19 veces	4
E	20 a 29 veces	2
F	40 ou máis	0

7. CONCLUSIÓNS E POSIBLES MELLORAS

A partir dos datos obtidos na enquisa que fixemos ao alumnado do IES de Mugarbos, elaboramos unha serie de gráficas e estudos relacionados con determinadas condutas de risco: uso do móbil, uso do ordenador e ver televisión en xornada escolar, consumo de alcohol e consumo de marihuana co obxectivo de analizar estatisticamente se afectan ao rendemento escolar. Comparamos os datos da enquisa coa nota media acadada por cada alumno ou alumna na primeira avaliación.

Tendo en conta os resultados dos estudos estatísticos realizados atrevémonos a sacar algunhas conclusións:

En primeiro lugar, con respecto ás horas vendo televisión en xornada escolar observamos que hai unha lixeira tendencia a que, cantas máis horas se pasa diante da televisión, menos nota media se acada; non obstante, isto non é un factor determinante no rendemento escolar, xa que a xente que ve a televisión entre 2 e 4 horas son os que mellores notas teñen, pero a partir destas 4 horas o rendemento redúcese notablemente.

Coas horas que se pasan diante do ordenador sen ser para traballos escolares, pasa algo parecido que coa televisión; hai unha tendencia cara a abaixo nas notas ao aumentar o tempo diante do ordenador, especialmente cando se pasan máis de catro horas. Vese ademais que o feito de non ver a televisión nin usar o ordenador un día de escola non inflúe para mellor nas notas.

No que respecta aos móbiles, dividímolos en dous apartados, o primeiro é o uso do móbil para xogar e o segundo é o uso do móbil nas redes sociais. Os resultados nos dous casos son bastante parecidos e en ambos pasa algo curioso: as persoas que din usalo catro horas teñen mellores resultados que os que o

usan dúas ou tres horas. Isto ten difícil explicación. Tamén parece que as mulleres baixan máis o rendemento escolar que os homes e isto apréciase na recta de regresión que ten maior pendente negativa. E para rematar, de novo, o feito de non usar o móbil para xogar ou para redes sociais en xornada escolar, non dá pé a mellores resultados.

Analizamos agora o consumo de alcohol e a súa relación co rendemento escolar. Os xoves inicianse neste consumo aos 13-14 anos (así o manifesta un total de 72 dos 202 xoves que cubriron a enquisa). A regresión dá unha moi leve correlación negativa entre consumo de alcohol e notas pero o regresograma dá un dato importante: as notas diminúen cando o consumo de alcohol aumenta, especialmente nos homes, ademais, a probabilidade de aprobar non sendo bebedor é maior que a de aprobar sendo bebedor, tamén a nota media dos non bebedores é máis alta que a dos bebedores. Para reflexionar queda a facilidade que teñen os xoves para conseguir o alcohol.

Polo que respecta ao consumo de marihuana parece ter moi pouca incidencia no centro, só o 22,3% din tela consumido algunha vez e o 7% di tela consumido máis de 10 veces na súa vida. Constátase que os poucos “grandes consumidores” teñen as notas máis baixas.

Analizando aspectos que poderían mellorar o traballo atopamos, por exemplo, que sería moi interesante ter analizado as condutas de risco por cursos xa que completaría a información, pero isto faría que o traballo se estendese demasiado. Tamén sería interesante facer o mesmo traballo coas notas da segunda avaliación e ver se se confirman os resultados obtidos na primeira.

Encanto á nosa valoración persoal do traballo realizado? Pensamos que foi unha moi boa oportunidade de investigar, practicar estatística nun contexto real, aprender e practicar inglés, estudar socioloxía, aprender a facer gráficas no ordenador, a buscar información, a traballar en equipo, a achegar ideas propias, a poñer en marcha unha enquisa que nos obrigou a poñernos diante dos nosos compañeiros do instituto, a cansarnos un pouco co traballo pesado de pasar datos da enquisa ao ordenador, a comprender o nerviosismo da profesora ao ver que o prazo de entrega remataba.... finalmente chegamos a tempo e ¡pagou moito a pena!

Martín, Marcelo, Sergio e Alba

Agradecementos:

Ao **profesorado** e ao **alumnado** do IES Mugardos, que permitiron a realización deste traballo, pola colaboración na realización do estudo e pola comprensión mostrada ás alteracións da rutina escolar que se produciron no centro.

A **Isabel Seoane Sánchez**, profesora do IES Mugardos pola súa axuda.

ABSTRACT

Objective. To examine associations between insufficient sleep (<8 h on average school nights) and health-risk behaviors.

Methods. 2007 national Youth Risk Behavior Survey data of U.S. high school students (n = 12,154) were analyzed. Associations were examined on weighted data using multivariate logistic regression.

Results. Insufficient sleep on an average school night was reported by 68.9% of students. Insufficient sleep was associated with higher odds of current use of cigarettes (age-adjusted odds ratio [AOR], 1.67; 95% confidence interval [CI], 1.45–1.93), marijuana (AOR, 1.52; 95% CI, 1.31–1.76), and alcohol (AOR, 1.64; 95% CI, 1.46–1.84); current sexual activity (AOR, 1.41; 95% CI, 1.25–1.59); seriously considered attempting suicide (AOR, 1.86; 95% CI, 1.60–2.16); feeling sad or hopeless (AOR, 1.62; 95% CI, 1.43–1.84); physical fighting (AOR, 1.40; 95% CI, 1.24–1.60), not being physically active at least 60 min ≥ 5 days in the past 7 days (AOR, 1.16; 95% CI, 1.04–1.29), using the computer ≥ 3 h/day (AOR, 1.58; 95% CI, 1.38–1.80), and drinking soda/pop > 1 time/day (AOR, 1.14; 95% CI, 1.03–1.28).

Conclusion. Two-thirds of adolescent students reported insufficient sleep, which was associated with many health-risk behaviors. Greater awareness of the impact of sleep insufficiency is vital.

Many adolescents are chronically sleep-deprived due to social, employment, recreational, and academic pressures as well as biological changes in the sleep/wake cycle (Carskadon et al., 2004; Dahl and Lewin, 2002; Institute of Medicine, 2006; Schuen and Millard, 2000). Insufficient sleep is also a symptom and corollary of several mental disorders, including major depression (American Psychiatric Association, 2000; Dahl and Lewin, 2002). The consequences of insufficient sleep may include a negative impact on the control of behavior, emotions, and attention that can be associated with health-risk behaviors (Dahl and Lewin, 2002). Short sleep duration and nightmares have been associated with suicide attempts in Chinese students (Liu, 2004). In a national sample of 10th–12th grade drivers, 15% reported driving drowsy at least once a week (National Sleep Foundation, 2006). O'Brien and Mindell (2005) examined sleep and risk behaviors among students from 4 high schools in Philadelphia; they reported an association between sleep problems and tobacco use, alcohol use, marijuana use, safety

behaviors, and sexual behaviors. These relationships need further examination in a nationally representative sample to inform public health and policy decisions that affect adolescent sleep. National surveillance data on sleep duration first became available in the 2007 Youth Risk Behavior Survey (YRBS) (CDC, 2008). We examined the associations between self-reported hours of sleep on an average school night and selected health-risk behaviors among adolescents using data from high school students in the 2007 national YRBS.

Methods

Survey

The national YRBS is a biennial, self-administered survey of US high school students. A three-stage cluster sample design was used to produce data representative of students in grades 9–12 in public and private schools in the 50 states and the District of Columbia. The 2007 school response rate was 81%; student response rate was 84%; and overall response rate was 68%. Each student record was weighted to adjust for school and student non-response and oversampling of black and Hispanic students. The study population included the 12154 students (87% with responses to the sleep question (13% with missing data on the sleep question omitted). Additional information about the YRBS can be found elsewhere (CDC, 2008).

Measures

Hours of sleep was assessed by the question, “On an average school night, how many hours of sleep do you get?” Responses were dichotomized into <8 h of sleep (insufficient sleep¹) and ≥8 h of sleep (sufficient sleep).

Health-risk behaviors

The following health-risk behaviors were examined: drank soda or pop (not including diet soda or diet pop) at least one time/day during the 7 days before the survey; did not participate in at least 60 min of physical activity on ≥5 of 7 days before the survey; on an average school day: watched television ≥3 h/day and played video or computer games or used a computer for something that was not school work for ≥3 h/day; in a physical fight ≥1 time during the 12 months before the survey; during the 30 days before the survey: smoked cigarettes on ≥1 day (i.e., current cigarette use), had at least one drink of alcohol on ≥1 day (i.e., current alcohol use), used marijuana ≥1 time (i.e., current marijuana use); had sexual intercourse with ≥1 person during the 3 months before the survey (i.e., currently sexually active); felt so sad or hopeless almost every day for 2 weeks or more in a row that they stopped doing some usual activities; and seriously considered attempting suicide during the 12 months before the survey.

Statistical analysis

Descriptive analyses included the weighted percent and 95% confidence intervals (CI) of characteristics of the study population. Prevalence estimates and 95% CI of the health-risk behaviors were calculated by sleep status. The age-, sex-, and race/ethnicity-adjusted odds ratio (AOR) and 95% CI for the association of insufficient sleep with each dependent variable was calculated with separate multivariate logistic regression models for each health-risk behavior. We tested whether associations of sleep with each risk behavior varied by race or sex by adding sleep × sex and sleep × race interaction terms into multivariate logistic regression models that included age, sex, and race/ethnicity, and sleep as main effects.

Statistical significance of adjusted odds ratios was determined at $p < 0.05$. Stratified models were run when the interactions were significant (Wald F $p < 0.10$) and were adjusted by age and race/ethnicity (if stratified by sex), or age and sex (if stratified by race/ethnicity). All analyses were conducted on weighted data using SAS-callable SUDAAN 9.0.3 (Research Triangle Institute, 2007) to account for the complex sample design.

Results

Approximately half (49.7%) of the total sample ($N = 12,154$) was female. The majority of students were non-Hispanic white (62.7%) and reported sleeping 7 h (30.2%) on an average school night (Table 1). More than two-thirds (68.9%) reported insufficient sleep (<8 h) on an average school night. The prevalence of health-risk behaviors among study participants is indicated in Table 1 and similar to estimates for the overall 2007 national YRBS sample reported elsewhere (CDC, 2008).

Insufficient sleep was associated with 10 of 11 health-risk behaviors examined (Table 2). For all 10, students who reported insufficient sleep had higher odds of engaging in the risk behavior than did students who reported sufficient sleep. There was no association between insufficient sleep and watching television ≥3 h/day (Table 2).

The association of sleep with health-risk behaviors varied by race/ethnicity for 2 of 11 associations tested. Students who reported insufficient sleep (versus students who reported sufficient sleep) had higher odds of feeling sad or hopeless among white (AOR, 1.83; 95% CI, 1.50–2.22) and Hispanic (AOR, 1.47; 95% CI, 1.17–1.84) but not black students (AOR, 1.20; 95% CI, 0.98–1.48) or students of other race/ethnicity (AOR, 1.51; 95% CI, 0.99–2.31). The association of insufficient sleep with not being physically active at least

Discussion

To our knowledge, this is the first large sample, nationally representative study of adolescents to examine associations between self-reported insufficient sleep on an average school night and selected health-risk behaviors and to examine if those associations varied by sex and race. These associations may be due to the impact of

¹ To correspond with a suggested definition of insufficient sleep by the National Sleep Foundation in its 2006 Sleep in America poll of adolescents (National Sleep Foundation, 2006).

chronic sleep insufficiency on cognition, decreasing adolescents' ability to comprehend consequences of risk behaviors or increasing susceptibility to peer pressure (O'Brien and Mindell, 2005). Insufficient sleep and substance use combined can have a synergistic influence on cognitive abilities (concentration, vigilance, alertness) and coordination, leading to an increased risk of accidents and may contribute to other risk-taking behaviors, like sexual activity. Psychiatric problems have been found to underlie the relationship between sleep and some risk behaviors (Johnson and Breslau, 2001, Patten et al., 2000) as well as parental control (O'Brien and Mindell, 2005).

There are several limitations to our findings. Due to cross-sectional study design, the temporality of associations cannot be determined. Results are representative of youth who attend public and private school only. Data are based on self-report; however, the questions have been shown to demonstrate good test-retest reliability (Brener et al., 2002).

Conclusions

More than two-thirds of US high school students report insufficient sleep on an average school night which is associated with a variety of health-risk behaviors. Continued national surveillance and research examining sleep duration and associated factors among adolescents is needed.

ANEXO 2

2015 National Youth Risk Behavior Survey

This survey is about health behavior. It has been developed so you can tell us what you do that may affect your health. The information you give will be used to improve health education for young people like yourself.

DO NOT write your name on this survey. The answers you give will be kept private. No one will know what you write. Answer the questions based on what you really do.

Completing the survey is voluntary. Whether or not you answer the questions will not affect your grade in this class. If you are not comfortable answering a question, just leave it blank.

The questions that ask about your background will be used only to describe the types of students completing this survey. The information will not be used to find out your name. No names will ever be reported.

Make sure to read every question. Fill in the ovals completely. When you are finished, follow the instructions of the person giving you the survey.

Public reporting burden for this collection of information is estimated to average 45 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: CDC Reports Clearance Officer, 1600 Clifton Road, MS D-74, Atlanta, GA 30333, ATTN:PRA (0920-0493)
